Lesson 07: Teradata Popular OLAP Examples

Capgemini

Module Object

➢To be familiar with popular OLAP functions.

➢To be familiar with the PARTITION By concept.

➢To be familiar with RANK() . ROW_NUMBER(), QULIFY functions.

Q&A

➢ 1. Which two partitioning expressions are available to both single-
- level and multi-level partitioned tables? (Choose two.)
- A. MODULO_N partitioning
- B. CASE_N partitioning
- C. RANGE_N partitioning
- D. Direct partitioning on a numeric column

➢ 2. What are two reasons a customer would choose table
➢ partitioning? (Choose two.)
- A. to improve performance of full table scans
- B. to reduce the I/O for range constrained queries
- C. for better distribution of data between the AMPs
- D. for the ability to archive specific partitions in a table

Q&A

➢ 3. On which two table types can a multi-level partitioned primary index (MLPPI) be created? (Choose two.)
- A. Volatile tables
- B. Derived tables
- C. Global temporary tables
- D. Compressed join indexes

➢ 4. Which two table types support multi-level partitioned primary indexes (MLPPI)? (Choose two.)
- A. Base tables
- B. Compressed Join Indexes
- C. Global temporary Trace tables
- D. Non-compressed join indexes
